

Documenting CEFEPIME IV INTRAOP

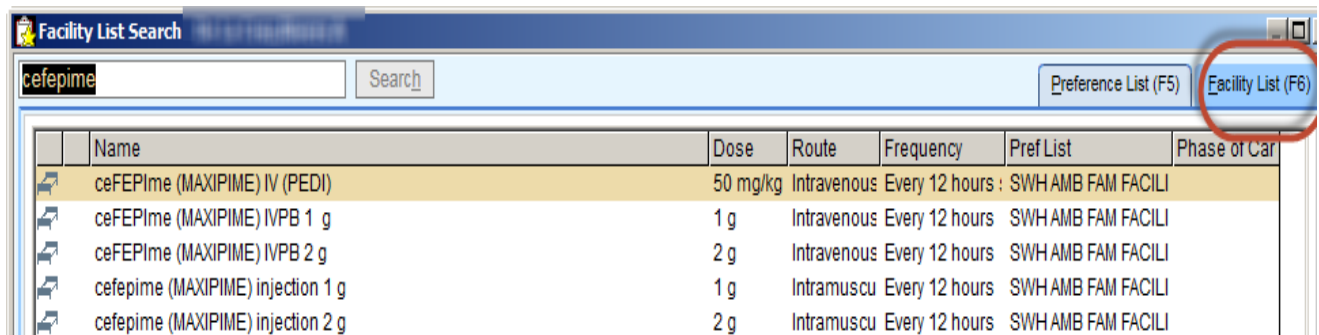

The cefepime IV medication (from the Preference tab) does not work because it is an orderable records. Orderable med records do not work in the intra-op (one-step setting).

Resolution: recommend ordering a cefepime with discrete dose, route, and frequency (can choose one from the **Facility List** tab).

The screenshot shows the 'Preference List Search' window. The search term 'cefepime' is entered in the search box. The 'Preference List (F5)' tab is selected and circled in red. The results table is as follows:

Name	Dose	Route	Frequency	Pre List
ceFEPime (MAXIPIME) IV		Intravenous		SWH IP TEH - GENERAL SURGERY MI

The screenshot shows the 'Facility List Search' window. The search term 'cefepime' is entered in the search box. The 'Facility List (F6)' tab is selected and circled in red. The results table is as follows:

Name	Dose	Route	Frequency	Pre List	Phase of Car
ceFEPime (MAXIPIME) IV (PEDI)	50 mg/kg	Intravenous	Every 12 hours	SWH AMB FAM FACILI	
ceFEPime (MAXIPIME) IVPB 1 g	1 g	Intravenous	Every 12 hours	SWH AMB FAM FACILI	
ceFEPime (MAXIPIME) IVPB 2 g	2 g	Intravenous	Every 12 hours	SWH AMB FAM FACILI	
cefepime (MAXIPIME) injection 1 g	1 g	Intramuscu	Every 12 hours	SWH AMB FAM FACILI	
cefepime (MAXIPIME) injection 2 g	2 g	Intramuscu	Every 12 hours	SWH AMB FAM FACILI	

An orderable is a med record that allows flexibility of ordering depending on the site.

For instance, if site A has the cefepime iv syringe (NICU) (440270) but site B has the cefepime IVPB PEDIATRIC (408038), then Epic will choose the first product for site A and the second product for site B if “ceFEPime (MAXIPIME) IV” is ordered.

It allows us to put this “orderable” record on a preference list without needing adjustments if site A switches to a different product in the future.

It also allows us flexibility when building order sets – many sites may have different cefepime “dispensable drugs” but the order set allows us to list the one orderable record on it (vs all 11+ cefepime options).
